PROFILE

Business Analyst with 5 years of cross-sector experience in requirements elicitation, process analysis, stakeholder engagement and data-led insight delivery across IT, consulting, operations, and healthcare. Built clear functional specifications and BI solutions using Power BI, SQL, and Excel, with a strong foundation in Agile and Waterfall SDLC delivery. Led 6+ digital transformation projects, delivering 20% efficiency gains and £20,000 in annual savings. 4x Annual Top Performer at HPE, for delivery impact on large-scale data migration and sales pipeline growth.

EDUCATION

University of Southampton

MSc in Business Analytics and Management Sciences

Highlight: Dean's List Award for academic excellence | (72%)

UK | 09/2023 - 12/2024

SRM Institute of Science & Technology

B. Tech in Electronics and Communication Engineering

Highlight: GPA - 87.58%

India | 06/2015 - 07/2019

KEY SKILLS

Technical Tools:

Data Analysis & Reporting:

- Python, SQL, Power BI, R
- Power Query, Power Automate, Excel, Visio

Cloud / CRM:

- Salesforce, AWS, ServiceNow, Monday

Delivery & Collaboration:

- JIRA, Confluence, Azure DevOps, SharePoint, MS 365, Lucid chart

BA / Operations Competencies:

- | | | |
|--------------------------------|---|-------------------------------|
| • Requirements Elicitation | • UAT Planning | • Dashboarding |
| • Stakeholder Engagement | • Test Case Design | • Predictive Forecasting |
| • Workshop Facilitation | • Agile Methodologies | • Backlog Refinement |
| • Prioritisation | • Waterfall Methodologies | • Process Mapping |
| • User Stories | • Defect Management | • Business & Data Analytics |
| • Acceptance criteria | • Change Management | • ITIL |
| • Business Process Improvement | • Risk Assessment | • Continuous Improvement |
| • Process Modelling | • RAID Management | • BRD, FRD, SRS Documentation |
| • Gap Analysis | • KPI Framework Design | • Non-functional Requirement |
| • Root Cause Analysis | • Software Development Lifecycle (SDLC) | |

PROFESSIONAL EXPERIENCE

Verra Mobility

UK | 09/2025 - Present

Operations Support Specialist

- Evaluated engineer utilisation and field activity data using Python and built an Excel dashboard using travel-time matrix analysis and route-feasibility logic, identifying territory coverage gaps and optimising engineer allocation to improve planning accuracy by 25%.
- Configured a ServiceNow API integration in Power Automate to extract and parse JSON device status data for automated reporting feeds, eliminating manual data collection and improving reporting efficiency by 35%.
- Coordinated UAT for ServiceNow SLA workflow changes with QA testers and business users, creating test scripts aligned to use cases, supporting test execution, and tracking defect resolution in JIRA and regression checks to reduce post-production defects by 35%.
- Identified gaps between ServiceNow out-of-box workflow rules and National Highways contract requirements, raising a change request to redesign hold and resolution logic that helped sustain 97% resolution turn-around time.
- Modelled as-is and to-be operational workflows in Visio using BPMN notation, to examine handoff gaps in ticket management, informing process changes that improved workflow consistency and cut repeat visits by 20%.
- Created 5+ Power BI dashboards to monitor engineer workload, SLA exposure, and ticket progression trends, enhancing visibility of operational risks and enabling faster resource planning.

NHS – University Hospital Southampton

UK | 04/2025 - 09/2025

Administrative Analyst (Cancer Research)

- Performed gap analysis across cancer referral workflows using Excel-based metrics tracking, surfacing 3 recurring bottlenecks and recommending a risk-based escalation protocol for high-risk referrals to clinical leads, reducing 62-day CWT (cancer wait time) breach risk by 15%.
- Developed Power BI reports to monitor capacity and demand across five cancer referral departments, highlighting breach risks against ward capacity and supporting decisions that improved bed availability and referral turnaround by 20%.
- Elicited workflow requirements from clinical and administrative stakeholders through workshops and process walkthroughs, producing requirement summaries that informed staffing reallocation decisions to address capacity gaps.
- Produced data packs for MDT clinical review meetings, consolidating patient pathway status, breach risk indicators, and capacity metrics from NHS Somerset trackers into clear, decision-ready reports for clinical leads across 5+ tumour pathways.

Business Analyst / Technical Consultant

- Led stakeholder workshops for 5+ process improvement projects to elicit and prioritise business requirements, documenting in BRDs, FRDs, and SRS artefacts to enable Agile solution delivery that reduced process cycle time by 10%.
- Designed Power BI dashboards and KPI scorecards to monitor process cycle times, backlog volumes, and exception trends, identifying Salesforce workflow bottlenecks that supported process improvements, contributing to a 30% increase in operational efficiency and annual savings of £20,000.
- Extracted and joined large operational datasets using SQL, then assessed performance trends and forecast variance in Python to support planning decisions, improving forecasting accuracy by 30% and device failure predictability by 15%.
- Applied MoSCoW prioritisation to business requirements and change requests, defining MVP scope and sequencing backlog priorities in JIRA to support Agile delivery and reduce scope creep by 15%.
- Queried device logs via SQL and analysed failure patterns in Python to identify root causes and flag at-risk devices, reducing recurring failures by 30% through preventative maintenance planning.
- Performed feasibility studies and cost-benefit analysis in Excel to support build-versus-buy decisions, contributing to RFP scoping, solution design documentation, and vendor selection across business units.

PROJECTS**Case Workflow Optimisation – Verra Mobility**

- Facilitated stakeholder workshops to document ServiceNow case-assignment rules, escalation triggers, queue handoffs, and reporting gaps, then produced BPMN process maps in Visio. Managed user stories, acceptance criteria, bugs, and UAT in Azure DevOps, linking requirements to defects and test results to support sprint tracking and release readiness that enhanced routing accuracy by 20%.

Triage Dashboard Optimisation — NHS University Hospital Southampton

- Captured requirements from bed manager to standardise bed-status logic and escalation thresholds, then modelled as-is and to-be maps in Visio using BPMN. Queried occupancy, discharge, and triage demand data in SQL and built Power BI dashboards to track bed utilisation, delayed transfers, and queue pressure, improving patient flow visibility and cutting bed allocation delays by 18%.

Legacy CRM to Salesforce Migration — Hewlett Packard Enterprise

- Coordinated JAD sessions to define migration requirements and document 80+ functional and data field mappings, then developed source-to-target mapping for 50,000+ customer records across Zoho and Salesforce objects. Defined transformation rules, deduplication criteria, and reconciliation checks for ETL, validating migrated records ahead of UAT and deployment.
